PROJECT INFORMATION				
Discipline / Acad. field		<b>Environmental sciences, industrial ecology</b>		
Type of project idea		<input checked="" type="checkbox"/> Erasmus Mundus JMD <input type="checkbox"/> Capacity Building in HE <input type="checkbox"/> Jean Monnet		
Project description				
<p>The proposal is called <b>MIND+</b> and is a continuation of the currently ongoing "Erasmus Mundus Master's Programme in Industrial Ecology (MIND)", which ends in September 2017. Industrial Ecology is an emerging interdisciplinary field combining natural, technical and social sciences in a systems view at scale levels from the global to the local. Its core concept is the analogy between processes in nature (biosphere) and processes in society (techno-sphere). Its main tools are life cycle assessment, material flow analysis and input-output analysis. With MIND+, highly motivated and talented students from all over the world will be attracted to the European Higher Education Area and will profit from that master programme, also in terms of getting a job: According to a survey of former MIND alumni, an employment rate of approximately 90% (!) has been reached within six months after their graduation.</p> <p>For more information please cf. <a href="http://www.emmind.eu">www.emmind.eu</a>.</p>				
Looking for a Partner Institution / Coordinator?				
<p>We do not look for a partner, as the consortium is already complete and the deadline (16 Feb 2017) quite close. However, we are keen to get recommendations to improve our application in order to present the anonymous reviewers a proposal of really high quality, in particular regarding the issue sustainability/financing after the funding through the European Commission's EACEA.</p>

Type of project idea		<input checked="" type="checkbox"/> Erasmus Mundus JMD <input checked="" type="checkbox"/> Capacity Building in HE <input type="checkbox"/> Jean Monnet		
Project description				
Looking for a Partner Institution / Coordinator?				
<p>We are interested in discussing possibilities for participation of TU Wien in projects in diverse fields of higher education and university management (HE&amp;UM) for which TU Wien can offer the necessary expertise.</p> <p>TU Wien is the oldest and biggest technical university in Austria. It was established in 1815, and at present, it has approximately 30000 students studying at eight faculties: Architecture and Planning, Civil Engineering, Electrical Engineering and Information Technology, Informatics, Mechanical and Industrial Engineering, Mathematics and Geoinformation, Physics, and Technical Chemistry.</p> <p>The International Office of TU Wien (IO) actively supports development of international cooperation in the area of HE&amp;UM between TU Wien and other higher education institutions. The IO has a long-term experience with EU projects and has prepared and coordinated many projects in different fields of HE&amp;UM, e.g. establishment and development of international offices, environmental protection, applied computing, continuing education, etc.</p> <p>We will be pleased to discuss any project ideas in which TU Wien could play an active role either as a partner or a coordinator.</p>

Discipline / Acad. field		<b>architecture, engineering, IT</b>		
Type of project idea		<input checked="" type="checkbox"/> Erasmus Mundus JMD <input checked="" type="checkbox"/> Capacity Building in HE <input type="checkbox"/> Jean Monnet		
Project description				
University of Pécs, Faculty of Engineering and IT and its industrial partners offer their experience and knowledge in performing "dual" degree courses in the field of architecture, civil, mechanical, electrical and environmental engineering and computer science engineering. We are pleased to join any EMJDM or Capacity Building consortium.				
Looking for a Partner Institution / Coordinator?				
All Partners – HEIs or private enterprises, industrial partners - are welcome who are interested in the effective and profitable cooperation of educational institutions and industry. Partnership is to be established also for other calls of Erasmus+ and common applications for International Visegrad Fund, Danube Transnational Programme, Interreg Central Europe, Interreg Europe, Cooperation Programme Interreg V-A Hungary – Croatia and H2020.				
The educational programmes (some of them also in English) of the Faculty of Engineering and IT cover technical, artistic and information technology related fields in the following branches: architecture, civil engineering, computer science engineering, architectural design, environmental, electrical and mechanical engineering.				
Main research fields are: energy design, efficiency of resources, building energetics and building ecology, sustainable cities, smart city technologies, heritage protection, computer algebraic and dynamic geometrical systems in higher education, structural diagnostics and analysis, solidarity architecture, virtual measuring systems and machine perception, non-destructive measurement methods.				
Possible topics of cooperation: <ul style="list-style-type: none"> <li>- staff and student exchange</li> <li>- new teaching and learning methods</li> <li>- employability and entrepreneurship, transversal skill development</li> <li>- informal and non-formal learning opportunities</li> <li>- international placement of students</li> <li>- curricula development for double/joint degrees</li> <li>- modernization of curricula, new and innovative courses, E-learning</li> <li>- internationalization strategies</li> <li>- common participation in EU funded projects</li> </ul>

Discipline / Acad. field		<b>Tourism&amp; Hospitality, International Relations Studies</b>		
Type of project idea		<input type="checkbox"/> Erasmus Mundus JMD <input checked="" type="checkbox"/> Capacity Building in HE <input type="checkbox"/> Jean Monnet		
Project description				
<p>The role migration plays in meeting future labour market needs in both origin and destination countries depends on the ability to match the supply and demand for skills in origin and destination countries. Migration requires inter-disciplinary approach from education institutions having the role of adapting their training programs to the changing needs of the labour market. Given the growing significance of events in modern society, taken together with the growing need for young professionals with organizational skills in the service sector as well as in public administration, main focus of the project is on innovating the training program in the fields of Tourism &amp; Hospitality and International Relations by developing two interdisciplinary modules with the aim of providing knowledge skills and competences in two major domains that are hardly addressed in the accredited curricula of most academic programs in the above mentioned fields of study, namely:                      Protocol &amp;Event Management and Intercultural Aspects of Migration and Security Issues</p>				
Looking for a Partner Institution / Coordinator?				
Looking for partners for a consortium coordinated by our institution as well as being open to join as partner in projects related to the areas of study above mentioned

<p>We aim at renewing our translation and interpretation training programme with all kinds of means, indispensable in the 21st century to make us able to offer updated courses, marketable diploma. Target groups are the students studying at BME and also adult learners with a BA diploma. The renewed programme will try to become as inclusive as possible and will provide better employment options, transversal skills, including digital competences for the participants. Therefore we are looking for innovative educational options, methodologies, and strategies to change our programme into a more inclusive one, and equip the teaching process with all kinds of ICT tools. We also plan to provide international training options to the participants. Besides, we are eager to learn best practices in connection with the above mentioned goals and develop mutual training programmes with well-known training institutions, HE organizations.</p>				
Looking for a Partner Institution / Coordinator?				
<p>An ideal partner would have the following capacities/abilities:</p> <ul style="list-style-type: none"> <li>- has experiences with innovative teaching methodologies used for general and professional language teaching and for translation, interpretation.</li> <li>- could teach/involve/motivate our colleagues to foster using ICT tools and other innovative teaching solutions</li> <li>- has experiences with inclusive educational methodologies in the Higher Educational sphere.</li> <li>- is willing to exchange staff and students</li> <li>- is ready to develop mutual training programmes</li> <li>- uses e-tools in translation and interpretation training</li> </ul>

Project description				
<p>University of West Hungary used to be a network university and is now in the process of reorganization. We are addressing sustainability by concentrating on research and education in our original fields of science: forestry, wood technology, economics and early childhood education. As of February 2017, two faculties located in the city of Szombathely will secede and our institution will go on working under the name of "University Sopron" with four faculties located in the city of Sopron, situated at the foot of the Lower Alps with beneficial geographical location in the border region. The research infrastructure at our university has reached "European" standards due to the investments of the last years and more than 80% of the academic staff has scientific degrees.</p> <p>As for our experience in international education, we have signed Erasmus+ agreements with over 150 European HEIs, used to send over 150 students abroad and host around 40 a year. Lately we have had 12 Brazilian students within the CSF Hungary program at the Faculty of Forestry, over 20 Erasmus Mundus (gSmart) students from Central Asian countries also at the Faculty of Forestry, over 10 students from India, Nepal and Thailand at the Simonyi Karoly Faculty of Engineering, Wood Sciences and Applied Arts. In the future, we hope to attract students from Asia, South America and Africa within the framework of the Stipendium Hungaricum scholarship program coordinated by our National Agency, the Tempus Public Foundation. We have started this program at the Alexandre Lamfalussy Faculty of Economics and at the Simonyi Karoly Faculty with 14 students this academic year.</p> <p>We would like to join a Consortium as a Partner Institution offering English language courses to Erasmus Mundus scholarship holders in our Doctoral Schools in the fields of forestry, material science, management and organizational sciences. Beside that we can offer English language master level courses in Wood technology and Geoinformatics.</p>

Project description				
<p><b>Objectives.</b> In the Sayano-Shushenskaya branch of Siberian Federal University Bachelor the studying of "Hydro power", "Construction of hydropower plant". We trained when teaching students it is important to consider the ecology of the region, methods for studying environmental problems and their solutions. The aim of the project is to study regions in Europe and Russia with companies that produce energy.</p> <p><b>Activities.</b> Is offered to develop a plan of cooperation between the parties involved in the grant. For the organization of work on the environmental situation. Speech at conferences and seminars to review the existing methods of work on environmental issues, the development of the curriculum for training students in the discipline "HPP Ecology", "Methods and means of HPP environmental research HPP". Writing a joint textbook on ecology, monographs.</p> <p><b>Results.</b> After the planned activities and the development of educational programs, writing textbooks, monographs and their introduction into the educational process the quality of training of engineers in the field of energy. Will increase the result of joint work are standardized methods of training engineers in the field of ecology energy.</p>

PROJECT INFORMATION				
Discipline / Acad. field	<b>Joint Master Degrees/Environmental Engineering/Learning Outcomes</b>			
Type of project idea	<input type="checkbox"/> Erasmus Mundus JMD <input checked="" type="checkbox"/> Capacity Building in HE <input checked="" type="checkbox"/> Jean Monnet			
Project description				
<b><u>Objectives</u></b>				
To harmonize Master Programmes in Environmental Engineering based on learning outcomes in Partner Countries universities.				
<ul style="list-style-type: none"> <li>To develop joint Environmental engineering Master programmes based on learning outcomes at PC Universities.</li> <li>To retrain academic and administrative university staff for joint programme realization.</li> <li>To pilot the developed joint programmes.</li> </ul>				
<b><u>Activities</u></b>				
<ol style="list-style-type: none"> <li>Analysis of existing JPs in EU and RU, where LO approach is implemented</li> <li>Design of Joint programmes based on LO (development of new modules, tutorials, handbooks),</li> <li>Development of JPs Quality Assurance criteria and procedures,</li> <li>Training courses for PC administrative &amp; teaching staff,</li> <li>6. JPs pilot teaching.</li> </ol>				
<b><u>Results</u></b>				
There will be designed and implemented several JPs in Environmental Engineering based on LOs in partner HEIs depending on specialisation of each HEI. One of the main outputs of the project will be implementation of the LOs approach in JPs: all the activities related to the training of students in the environmental engineering programmes are in the holistic use of learning outcomes and will be promoted and disseminated through dissemination activities: seminars to explain the joint programmes curricula, presentations key findings of the project at relevant meetings and conferences, publications of articles, leaflets, and information letters.

Project description				
<p>In the transforming world, share of good practices ensures prosperity and a real integration of emerging regions into the democratic mosaic of the world. The project, based on this conviction, aims at developing innovative curriculum with platform-independent, universally applicable digital training, teaching and study materials to enhance learning and teaching English for medical purposes in alignment with the complementary didactic manual and sample lessons for the teaching staff at the Uzbek medical universities. Vis-a-vis the development of the teaching-learning materials, a thorough analysis of the field of ESP in medical context will be carried out by the consortium members the output of which will be a collection of scientific studies edited by expert members and published on-line to share and update knowledge on ESP in the cross-section of medical sciences, life sciences, and humanities. The primary reasons for this project are to accelerate the rapprochement of Uzbekistan and the EU by providing high quality innovative English teaching-learning materials and to support cooperation of the partners in the exchange of knowledge, experience and best practices at a practical level of ESP. Special added value of the project is manifested by the integration of authentic scientific publications from the database of medical journals into the digitalized teaching learning materials. By doing so, the consortium aims to facilitate access to the latest research results in prestigious scientific journals in the field of medicine and life sciences to the Uzbek medical HEIs where these are not available yet and enhance interchange of research results and better integration of Uzbek medical professionals into the international scientific networks. The increased competence in the English language will bring about a more positive attitude towards the European values and make it possible for Uzbek medical professionals to participate in European and international projects.</p>

Project description				
<p>In the transforming world, share of good practices ensures prosperity and a real integration of emerging regions into the democratic mosaic of the world. The project, based on this conviction, aims at developing innovative curriculum with platform-independent, universally applicable digital training, teaching and study materials to enhance learning and teaching English for medical purposes in alignment with the complementary didactic manual and sample lessons for the teaching staff at the Uzbek medical universities. Vis-a-vis the development of the teaching-learning materials, a thorough analysis of the field of ESP in medical context will be carried out by the consortium members the output of which will be a collection of scientific studies edited by expert members and published on-line to share and update knowledge on ESP in the cross-section of medical sciences, life sciences, and humanities. The primary reasons for this project are to accelerate the rapprochement of Uzbekistan and the EU by providing high quality innovative English teaching-learning materials and to support cooperation of the partners in the exchange of knowledge, experience and best practices at a practical level of ESP. Special added value of the project is manifested by the integration of authentic scientific publications from the database of medical journals into the digitalized teaching learning materials. By doing so, the consortium aims to facilitate access to the latest research results in prestigious scientific journals in the field of medicine and life sciences to the Uzbek medical HEIs where these are not available yet and enhance interchange of research results and better integration of Uzbek medical professionals into the international scientific networks. The increased competence in the English language will bring about a more positive attitude towards the European values and make it possible for Uzbek medical professionals to participate in European and international projects.</p>				
Looking for a Partner Institution / Coordinator?

Project description				
<p>Idea is based on water problem of regions of Central Asia after recently has started building of the Rogun hydropower plant. Further, countries of Central Asia, particularly Uzbekistan will face with shortage of water for irrigation, which is by-turn will badly cause for the life of inhabitants and economy in whole. Taking into consideration of difficulty of solving this problem on political levels, it is necessary to start preparation for getting over the difficulty by adaptation of new branches of learning into curriculum of Master students / or to found new direction of Master Degree based on the exploration and education of artesian water; use and learning of technologies of trickle irrigation; new methods of dewatering control.</p> <p>In this project I am planning to join Navoi Mining and Metallurgical Complex (NMMC), whereas, this Complex has technical resources, rich experience in exploration and in drilling. Moreover, in the history of NMMC there is creation of the town of Zarafshan in the middle of the Kizilkum desert.</p>				
Looking for a Partner Institution / Coordinator?				
<p>We are looking for partners to found above mentioned Master Degree at one of the Institutes of Uzbekistan, in the beginning to analyze of outcomes. Partner Institution should have field of study on Water Engineering and Water resources Management. Also we search for directions on Environmental studies, Agriculture studies and Geological studies.</p>

Project description				
<b>Curriculum development on training of bachelors and experts in the field of "Intellectual" electric networks.</b>				
<p>Now in our country the modern information infrastructure of the account of the electric power in a power supply system is created. With growth of technical possibilities of operating means of power supply system increases necessity for the analytical information on operated object for acceptance of correct decisions.</p> <p>Despite global development of "intellectual" networks and set of publications there are not enough practical manuals for studying and preparation of experts, and also in construction or designing of "clever" networks in the industry. These questions are especially actual in construction of new industrial networks or at the enterprises which do not have necessary information infrastructure for introduction of modern innovations in this area. In republic there are sharply not enough experts in adjustment and operation of the automated control systems of electric networks, and also teachers for teaching in higher institutions and professional colleges.</p> <p>Actual problem is development of manuals for training and designing of "Intellectual" industrial networks. On department of "Electrical engineering" of Bukhara engineering-technological institute we carry out researches on introduction of information technology in control of distributive networks. On the given subjects we have published more than 20 journal articles, among them 10 in foreign scientific journals. On department has been created the scientific laboratory for research of distributive networks with information infrastructure.</p> <p>According to set forth above an actual problem is creation of educational standard base on training of bachelors and experts (masters) in modeling, adjustment and service of the "intellectual" networks, having a high demand in manufacture.#</p>

Project description (max. 300 words)				
<p><b>Curriculum development of master and doctoral courses on renewed energy sources</b></p> <p>In Uzbekistan in accelerated rates are carrying out developments on practical use of renewed energy sources. The country has favorable possibilities of use of such kinds of renewed energy sources, as energy of water course, sunlight, wind, biomass and geothermal resources. Their development is indispensable condition of maintenance of the sustainable development of republic power system at preservation of natural resources for the future generations.</p> <p>For development of alternative energy sources in Republic have been accepted number of the acts directed on modernization of power system and on development of alternative energy sources.</p> <p>With a view of creation of favorable conditions for development of use of renewed energy sources are developed and realized measures of the state support. International institute of solar energy has been established. On creation of necessary conditions has been worked out a bill for development of renewed energy sources, has been increased the material base of scientific research institutes and business structures.</p> <p>In higher institutions and professional colleges it has begun training of qualified personnel for this sphere. Rapid development of alternative sources more and more demands highly qualified experts with skills of operation of this equipment. At the same time existing educational standard base in the field demands development and addition, preparation of special curriculums in which should find reflection in modern alternative energy sources on the basis of foreign experience. In the education system there are not enough teachers having modern knowledge and skills in the field of alternative power. And development of joint project with qualified EU partners could help in this matter.#</p>

Project description				
<p>Energy potential of Uzbekistan plays an important role in economic transformation. Following figure presents the structure of primary energy sources consuming by the economic sectors of the republic: population - 49,2%, Industry -35,0%, transport- 9%, agriculture- 6,0%, construction, 0,8% .The main share of energy consumption accounted for the social sphere and in the industry, from which almost completely dependent the level of energy efficiency of the economy and greenhouse gas emission.</p> <p>The energy intensity of industry and municipal economy of Uzbekistan 2.5-3 times higher than in industrialized countries.</p> <p>By 2030, taking into population growth, the GDP, acceleration of urbanization, energy consumption will increase from 60 million to 150 million tons of oil in Uzbekistan. This trend requires comprehensive measures to improve energy efficiency. Having a high level of energy intensity of the economy, by comparison with other countries, Uzbekistan has large reserves for a radical reduction in energy consumption, respectively, greenhouse gas emission reduction.</p> <p>The Government of Uzbekistan pays great attention to the development of education and training. However currently, no one educational institution which could train specialists in the field of energy management and energy-efficient technologies in industry.</p> <p>In this connection, the proposed project will focus on the modernization of the existing curriculum of Magistracy and the development of new modules to create a new course in the field of energy management and energy efficiency in industry of master level and the training of young teachers in this field.</p>
