

THE IMPORTANCE OF FOURLOG LOGISTICS TRAINING (INTERNATIONAL EXERCISE) IN HUNGARIAN MILITARY HIGHER EDUCATION

The FOURLOG Logistics Training, which has been held almost every year for the past two decades by the Department of Supply, Finance and Military Transportation serves the purpose of internationalization.

The students learn about the peculiarities of logistics in other nations and work together to solve tasks based on fictitious data in a multinational setting, thereby mastering sub-unit command.

The main objective of the training is to acquaint military cadets with tactical logistics support based on situational awareness reports in multinational working groups and to put into practice the theoretical knowledge acquired during their studies.

Cadets are required to complete tasks related to a peace support operation that will appear in their subsequent work, both in national defence and crisis response operations.

Distribution of the nationality of the participating cadets since 2010
